## Full Stack Developer

### Description

A Full Stack Developer is a versatile software engineer who can work on both the front-end (client-side) and back-end (server-side) of web applications and software. They are responsible for designing, developing, and maintaining the entire application, from user interface to databases and servers.

- Work across the full stack, building highly scalable distributed solutions that enable positive user experiences and measurable business growth
- Develop new features and infrastructure in support of rapidly emerging business and project requirements
- Assume leadership of new projects, from conceptualization to deployment
- Architect and provide guidance on building end-to-end systems optimized for speed and scale
- Ensure application performance, uptime, and scale, and maintain high standards for code quality and application design
- Engage with inspiring designers and front-end engineers, and collaborate with leading back-end engineers to create reliable APIs
- Work with agile development methodologies, adhering to best practices and pursuing continued learning opportunities

### Responsibilities

#### Front-end Development:

- Building and maintaining user interfaces (UI) using languages like React, HTML, CSS, and JavaScript.
- Creating interactive and responsive web pages.
- Ensuring a smooth and intuitive user experience.

#### Back-end Development:

- Developing and managing server-side logic, APIs, and databases.
- Designing and implementing database structures.
- Experience with Postgres and MySQL.
- Working with backend languages like Node.js and Python.
- Experience with AWS is must.
- Strong experience with third party integrations.

### Hiring organization

Karnacy

### Employment Type

Full-time

### Working Hours

9:30AM – 6:00PM

### Date posted

July 30, 2025

for speed and scale

- Ensure application performance, uptime, and scale, and maintain high standards for code quality and application design
- Engage with inspiring designers and front-end engineers, and collaborate with leading back-end engineers to create reliable APIs
- Work with agile development methodologies, adhering to best practices and pursuing continued learning opportunities

## **Qualifications**

- 10+ years
- Willing to work from office for 6 days

## **Skills**

- Understanding of system architecture, design principles and deployment architecture.
- Proficiency in version control systems like Git, Github.
- Collaborating with designers, product managers, and other developers.
- Excellent debugging, troubleshooting and optimization skills
- Experience in unit/integration testing
- Ability to stay updated with the latest technologies and trends.
